Binary Search

Given an array of integers `nums` which is sorted in ascending order, and an integer `target`, write a function to search `target` in `nums`. If `target` exists, then return its index. Otherwise, return `-1`.

EXAMPLE

Input: `nums = [-1,0,3,5,9,12]`, `target = 9`
Output: `4`

CONSTRAINTS

- `1 <= nums.length <= 10^4`
- All the integers in `nums` are unique.

🚀 Submit & Analyze

```
1 function search(nums, target) {  
2   // Write your solution here  
3   return -1;
